

# Cyber-Crime Prevention Plan

## Three Important Steps to Getting Started

- I. Develop and maintain a strong proven cyber security program for your organization that includes a robust IT presence and security measures. Have an outside IT security organization assess your cyber profile, and suggest security needs and practices.
  
- II. Require that everyone in your organization undergoes cyber-crime identification and prevention training on a regular basis. Regular education and prevention practices are the keystones to prevention. Have a solid culture of cyber awareness in your business or organization at all times.
  
- III. Develop a plan on what to do when your business or organization becomes a victim of a cyber-crime. Have a risk advisor assess your cyber exposures and walk you through the steps and costs you will need to go through when you are hit by a cyber-crime.
